Summary

Software engineer working in Kotlin, with Jetpack Compose, MVVM, Coroutines and Flow for asynchronous work, Hilt and Koin for dependency injection, and Retrofit, OkHttp and Ktor for APIs. About two years of professional Android work alongside a computer science degree. Much of it has been logistics-adjacent: an Android client for industrial environments exchanging live data with a web platform, where the real work was deciding what should be real time and what should be batched and then defining a shared event schema across both systems, and location services for a shipping company built on Mapbox with a custom heatmap layer. I am strongest where the framework stops explaining itself. I once traced a production rendering fault in a Compose app down to a missing glyph in the font fallback that was breaking the characters and the layout metrics at once, which is the kind of problem you only solve by understanding the layer underneath the API you are calling. I write unit and instrumentation tests, review code carefully, and have practised giving precise feedback deliberately, first as a teaching assistant and then as an Android instructor. Currently completing an MSc in Computer Science (Software Engineering) at the University of Genoa.

Experience

Widecons

Genoa, Italy · On-site

Android Developer

Apr. 2026 - Aug. 2026

- Engineered an Android application for industrial environments in Kotlin, building the client against an existing JavaScript/TypeScript web platform
- Enabled real-time data exchange between the Android client and the web platform by defining a shared data contract and event schema across both systems
- Delivered features in an Agile team on a two-month release cycle, working directly with backend and front-end engineers on shared API contracts

Quera

Tehran, Iran · Remote

Android Instructor

Dec. 2024 - Jul. 2025

- Authored 20 Android coding exercises with reference solutions and assessment criteria, running code reviews on student submissions and writing structured feedback explaining why a solution failed
- Produced one of the platform's top-performing Android courses by student satisfaction and sales, by designing it around structured, progressively harder learning paths

Mobarakeh Steel Company

Isfahan, Iran · On-site

AI Workshop Mentor

Feb. 2025 - May. 2025

- Ran AI and machine learning training workshops for around 100 senior managers at one of Iran's largest industrial companies, presenting the material to an audience with no technical background
- Focused on practical application inside industrial operations: improving productivity, and supporting decisions made from data rather than from intuition

Shipnow1800

Isfahan, Iran · On-site

Android Developer

Dec. 2023 - Mar. 2024

- Cut application startup load time by 30%, by profiling and rewriting initialisation routines
- Delivered big-data visualisation across more than five graphical layers, by integrating Mapbox and building a custom heatmap feature for location-based services

Kasra Co.

Isfahan, Iran · On-site

Android Developer

Jan. 2023 - Jun. 2023

- Worked with Kotlin Multiplatform Mobile while it was still early-stage technology with very little documentation available, sharing business logic across platforms
- Tracked a production UI rendering bug in a Jetpack Compose app down to a missing-glyph font fallback, which was breaking both the characters and the layout metrics, and fixed it with locale-based font selection across several languages and scripts
- Delivered features against complex business requirements in a cross-functional Agile team of more than ten: Android developers, designers, product managers and backend engineers

University of Isfahan

Teaching Assistant, Data Structures

- Taught trees, graphs and algorithm design, reviewing student code in labs and guiding efficient data-structure implementations

Isfahan, Iran · On-site

Jul. 2022 - Jan. 2023

Freelance

Android Developer

- Implemented deep linking and integrated a wallet payment flow to support in-app purchases, handling the client-side integration with the payment provider
- Delivered more than five production Android applications to client specification, including a restaurant application using Google Maps and live GPS location
- Maintained multiple concurrent Android applications across distributed client teams, owning feature delivery and fixing crashes and bugs end to end

Tehran, Iran · Remote

May 2022 - Dec. 2022

CS50x Iran

Teaching Assistant

- Supported students on Harvard University’s CS50 course, running bug-fixing sessions through their failing code rather than handing over answers

Tehran, Iran · Remote

Apr. 2022 - Dec. 2022

Projects

Leopard

Kotlin Multiplatform · Jetpack Compose · MVVM · Ktor · Coroutines · Hilt

- Contributed to an organisational attendance management application built on a single Kotlin Multiplatform codebase, live on Google Play with over 1,000 installs
- Worked on multi-language support through a locale-aware resource layer

Google Play

Crypto Market Tracker

Kotlin · Retrofit · Interactive charts · JUnit

- Personal project, built because I follow the markets myself: live cryptocurrency prices, interactive historical price charts across timeframes from 12 hours to all-time, and a market news feed
- Wrote JUnit unit tests over the chart adapter that maps API time-series data onto the chart component

GitHub

Skills

Languages	Kotlin, Java
Android	Android SDK, Android Studio, Jetpack Compose, ViewModel, Room, Material Design, Kotlin Multiplatform (KMP/KMM)
Architecture & DI	MVVM, Hilt, Koin, SOLID principles, design patterns
Async & APIs	Kotlin Coroutines, Kotlin Flow, LiveData, Retrofit, OkHttp, Ktor, RESTful APIs, JSON parsing
Testing & Quality	JUnit (unit tests), Espresso (instrumentation and UI tests), code review, profiling and performance tuning
CI/CD & Tooling	GitHub Actions, Gradle, Git (branching, merging, pull requests), GitHub, build automation
Process	Agile, Scrum, cross-functional delivery with product, design and backend

Languages

English	Professional working proficiency
Persian	Native or bilingual proficiency

Education

University of Genoa

MSc, Computer Science (Software Engineering)

Genoa, Italy

2025 - Present

University of Isfahan

BSc, Computer Engineering

Isfahan, Iran

2020 - 2024
